The MAILING DATE of this communication appears on the cover sheet with the correspondence address All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS. This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.			
1. This communication is responsive to <u>brief filed 23 October 2006</u> .			
2. The allowed claim(s) is/are <u>1-35 and 52-61</u> .

REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance.

The invention as claimed is directed to a multilayered film (and process for forming said multilayer film) comprising a fluoropolymer layer, a thermoplastic polymer layer, and a tie layer between and on a surface of both the fluoropolymer layer and the thermoplastic polymer layer.

The adhesive layer comprises a tackifier, an ethylene/alpha-olefin copolymer, and a styrene block copolymer.

Kim et al. and Hattori et al. represent the closest prior art. However, upon reconsideration and in view of the applicants' arguments, neither reference teach or fairly suggest the invention as claimed. While Kim et al. teach a fluoropolymer layer adhered to a thermoplastic layer with an adhesive comprising an ethylene/alpha-olefin copolymer, the adhesive does not contain a tackifier or styrene block copolymer. Although the adhesive of Kim et al. may contain an elastomer, the elastomers cited (including styrene/butadiene) are random copolymer and not a block copolymer as recited in the claims. Upon reconsideration, the examiner agrees that there is no teaching or motivation to replace the random elastomer of Kim et al. with a combination of the tackifier and block copolymer of Hattori et al. Fluoropolymers are known to have non-sticking characteristics and Hattori et al. do not teach using their adhesive with fluoropolymers. As such, one skilled in the art would not have no expectation that replacing the random elastomer of Kim et al. with a combination of the tackifier and block copolymer of Hattori et al. would result in an adhesive that would successfully bond a fluoropolymer to a thermoplastic polymer layer.
